Association of Professional Engineers \& Geoscientists of Saskatchewan

## 2023

## Salary Survey

Report Compiled by
Insightrix Research Inc. 220 - 536, 2nd Ave North

## Results Summary

## Sample Statistics

- A total 1,541 members of APEGS completed the survey from February 2 to March 6, 2023. Of those, 1,438 are employed full-time as engineers or geoscientists.

## Salary Statistics (Full-time Employees)

- The average salary (not including bonus) is $\$ 114,143$ (up $1.1 \%$ from $\$ 112,940$ in 2022).
- The median salary (not including bonus) is $\$ 105,000$ (up $0.96 \%$ from $\$ 104,000$ in 2022).
- Fifty percent of salaries fall between $\$ 82,000$ and $\$ 137,697$.
- Ninety percent of salaries fall between $\$ 63,000$ and $\$ 193,800$.

## Additional Income

- Over two thirds (70.9\%) of members who participated in the survey report receiving bonuses. This is consistent with previous findings ( $68.8 \%$ in 2022).
- The median bonus is $\$ 6,000$, including those who receive none, representing an increase from previous results (\$5,000 in 2022).

## Overall Statistics

- Nearly all respondents (95.4\%) indicated their employer pays for benefits (including pension plan, sickness and disability insurance, life insurance, health plan, dental plan).
- Eight in ten (87.5\%) indicated their employer pays for their participation in professional development activities (such as paid leave travel expenses, course fees, course materials).
- $91.4 \%$ mentioned that their employer pays for APEGS annual dues.
- $19.2 \%$ have permission to consult.
- Overall, $19.4 \%$ of responding members are women with close to one half ( $39.2 \%$ ) having five years of experience or less in their profession.
- Nearly all respondents work full-time (98.1\%).

## Differences by Industry, Sector and Discipline

- The median salary for full-times employees in the public sector is \$109,000 and the median salary in the private sector is $\$ 103,000$.
- Highest paying discipline: Geological/Mining/Petroleum (Median: $\$ 118,500$ ).
- Highest paying industry: Resource Industry Except Oil \& Gas (Median: \$128,169).
- Highest paying job function: Corporate Management (Median: \$165,000).

## Regression Analysis

- Professional designation (P.Eng. and/or P.Geo.), supervision scope and job environment are the top three predictors of salary.

## Introduction, Methodology and Research Notes

## Goals and Objectives

In November 2022, the Association of Professional Engineers and Geoscientists of Saskatchewan (APEGS) contracted Insightrix Research to conduct a salary survey of their members. The survey inquired about base salary for the 2022 year, bonuses received, hours worked, education, work duties, and other factors that may be related to salary. Salary surveys have been conducted by APEGS in previous years and so, for some questions, it is possible to compare current results to the past.

## Survey Completion Results

APEGS provided Insightrix with a contact list of 6,943 members, including professional engineers, professional geoscientists, engineers-in-training, geoscientists-in-training, and limited members. Insightrix invited members to participate in the study via email, which included a unique link for each member to provide their responses. Surveys were completed between February 2 and March 6, 2023. A total of 1,541 members completed the survey representing a $22 \%$ response rate.

## Data Accuracy

Those who provided annual salaries greater than $\$ 300,000$ and/or bonuses equal to or higher than their annual salary were asked to verify their response before proceeding further within the survey. Only responses from respondents who are currently employed in engineering or geoscience are reported.

## Analysis of Results

Data have been presented with means, medians, upper, and lower quartiles, as well as $5^{\text {th }}$ and $95^{\text {th }}$ percentiles. Where possible, tables include detailed cross-tabulations broken down by education and experience. Due to confidentiality restrictions and respect for the privacy of those who took the survey, not all statistics can be reported, nor can all categories be broken into smaller ranges. Categories with fewer than ten members are not shown. Unless otherwise specified, annual salaries reported within the report reflect annual salary including commissions. Respondents who report being unemployed, retired, do not work as an engineer or geoscientist, or work zero hours a week are excluded from salary calculations.

A lasso regression model was used to produce a formula that allows members to predict their salary by entering their own ratings.

## Statistical Notes

Although the mean, or arithmetical average, is a more familiar statistic, the median, or middle value is often more descriptive and is not affected by extreme high or low values. The median is the value at which one half of responses are higher and the other half of responses are lower. For this reason, the median is suggested as the more reliable statistic throughout this report. Where applicable, both statistics are mentioned.

In general:

## When mean is higher than median:

There are some very high values and more moderate to low values.
When median is higher than mean:
There are some very low values and more moderate to high values.

In a salary survey:

## When \% change in mean is negative and \% change in median is positive:

This may suggest that most of the group is established (many moderate to high values) with some entrylevel candidates (some very low values).

## When \% change in mean is positive and \% change in median is negative:

This may suggest that most of the group is around entry-level (many low to moderate values) with some very high paying positions (some high values).

When \% change in median is positive, higher than \% change mean:
This may suggest that most of the group is very established and seeing steady salary increases, while highest-paying positions are not seeing such large increases. This may also indicate only a few entry level candidates compared to the number of established individuals.

## When \% change in mean is positive, higher than \% change median:

This may suggest that most of the group is very established and seeing steady salary increases, while highest-paying positions are seeing even larger increases. This may also indicate very few entry-level candidates compared to the number of established individuals.

## Study Results

## Charts and Tables:

## General legend for salary charts:

## Percentiles 75 and 25

(High and Low Quartiles)
Beige Boxes
One half of salaries fall between these values.
Percentiles 5 and 95
Black lines

Ninety percent of salaries fall between these values.

## Total Salary (Full-Time)

## Total Salary (Full-Time and Part-Time)

## Job Classification Questions

## Categories included in the job classification questions are as follows:

- Duties
- Education
- Experience
- Decisions
- Supervision Received
- Leadership Authority
- Supervision Scope
- Use of Professional Seal
- Job Environment
- Absence from Base
- Accident and Health Hazards

## Duties (A) (Full-time Employees)

**Risk level is self-assessed based on the following point matrix:
Low hazard-limited exposure. ..... 0 2
Moderate hazard-limited exposure. ..... 5
.............................................................................................. 8 .....  8
High hazard-limited exposure ..... 10
Low hazard-occasional exposure .....  5
. 8
Moderate hazard-occasional exposure ..... 1012
High hazard-occasional exposure. ..... 15
Low hazard-frequent exposure ..... 1012
Moderate hazard-frequent exposure ..... 1518
High hazard-frequent exposure ..... 20

## Regression Analysis

## General Analysis

A lasso regression model was used to establish a framework for predicting salaries for engineers and geoscientists working in different industries. This process was used to:

- Identify how closely factors are associated with salaries
- Identify Boolean components (such as receipt of professional designation) influencing salary
- Create a linear formula that effectively predicts salaries while minimizing model overfitting

The model explains about 62 percent (61.6\%) of variance in salary. A formula was produced which members of APEGS can easily use to estimate their salary.

| Factor | Coefficient |
| :--- | :---: |
| (Constant) | \$ 42779.14 |
| Duties (A) | $\$ 109.13$ |
| Experience (C) | $\$ 378.54$ |
| Recommendations (D) | $\$ 104.19$ |
| Supervision Received (E) | $\$ 13.28$ |
| Leadership Authority (F) | $\$ 113.27$ |
| Supervision Scope (G) | $\$ 818.20$ |
| Job Environment (I)* | $\$ 594.53$ |
| Absence from Base of Operations (J) | $\$ 399.12$ |
| Accident and Health Hazards (K) | $\$ 526.43$ |
| Professional Designation(s) | $\$ 9143.10$ |

To calculate the approximate projected salary, input the points for each variable in the following formula:

## Formula for expected salary $\left(\mathrm{S}_{\mathrm{E}}\right)$ without bonus:

$$
S_{E}=42,779+109 * A+365 * C+379 * D+13 * E+113 * F+818 * G-595 * I+399 * J+526 * K
$$

Add \$9,143 if you have acquired professional status within your field (P.Eng. and/or P.Geo.)

## Additional Notes

- Use of professional seal was excluded from the model due to this factor being not applicable for some respondents.
- 10 -fold cross validation was used to select a lambda value for the lasso model.
- Higher ratings for factors with an asterisk (*) are associated with lower wages.
