

Job Posting

Job Title: Project Engineer

Location: Estevan, SK / Calgary, AB

Job Overview:

Reporting to the Manager, Integrity Projects the successful candidate will be responsible for executing projects required by the Kingston Midstream Sustainment & Integrity Management Programs in support of the Kingston Midstream Corporate Plan; in accordance with approved scopes, schedules, budgets; and to ensure all activities are conducted in compliance with Kingston Midstream's policies and procedures and applicable regulations.

Position Responsibilities

- Execute projects in a manner that develops and maintains sound relationships with customers, contractors, regulators, communities, landowners, and other significant stakeholders
- Plan and execute engineering, construction, and maintenance activities in accordance with Kingston Midstream's health, safety & environmental standards, design specifications, and applicable regulations
- Plan, develop, and design project scopes, budgets, and schedules to execute integrity projects safely and effectively. Quality considerations include industry standards as well as Kingston Midstream standards and specifications
- Manage daily project activities as part of planning, designing and safely executing a variety of system integrity projects. Fully accountable for assessment, planning, management, and execution of project activities
- Direct the efforts of internal and external departments, consultants, and contractors, including those outside the incumbent's engineering discipline, to ensure that project scopes, project schedules, and project budgets meet company objectives
- Execute capital and expense projects up to \$2,000,000 and higher on occasion.
- Manage sustainment projects including: piping upgrades, rotating equipment upgrades, measurement and metering projects, and tank or vessel projects
- Manage integrity projects including: cathodic protection, pipeline depth of cover, geohazards, pipeline or tank repairs, pipeline or tank or facility inspections
- Monthly travel to the field is required

Skills and Qualifications:

- Engineering Degree or Diploma in Engineering Technology
- Eligible for registration with APEGS and APEGM or SASTT and CTTAM
- 2-5 years of progressively responsible engineering experience related to pipeline and facility integrity and pipeline operations
- Knowledge of pipeline standards including CSA Z662, regulations including the CER OPR and MB/SK Pipeline regulations, industry best practices, and pipeline system operations is an asset
- A high degree of initiative and the ability to work effectively, either independently or in a team environment
- Previous project management experience is an asset

Kingston Midstream is committed to ensuring a safe workplace through many measures and is requiring all new employees to provide proof of full COVID-19 vaccination as a condition of employment.
