## **Licensee Member Scope of Professional Practice Form**

The professional services which the holder of a restricted licence may perform are defined and described in terms of function, product, and application. Restrictions to the scope of professional practice are imposed in terms of these three elements. Specifically, the professional services performed by the holder of the restricted licence must be restricted, confined, or limited with respect to one of the following: function, product, or application.

In order that the Licensee Admissions Committee can determine whether your requested limitation is acceptable, please complete the following form as concisely as possible. This completed form must accompany your application.

**1. Function:** Indicate which activity(ies) described in the definition of the practice of professional engineering or the practice of professional geoscience best describes the work you perform.

---

---

---

**2. Product:** What do you produce or what service do you provide?

---

---

---

**3. Application:** What is the end use of the product or service you provide?

---

---

---

**4. The proposed wording of your scope of practice should be the same as the Field of Practice on your Licensee Application:** Describe the areas (fields) of practice in which you propose to practice, commencing with a major discipline within professional engineering or professional geoscience, then add your specialty or specialties and the application (i.e. building type(s), specific industry (ies) or within specific operating constraints.

---

---

---

---

**5. Who currently assumes responsibility for the engineering or geoscience work described in your proposed scope of practise?**

---
